

# Use case - Buyer updates saved card

## Use case

Step	Description	System
1	User chooses to update a saved card	Web shop
2	User is directed to save card page	Point
3	User chooses card type	Point
4	User enters card details	Point
5	User does 3D-Secure if required	Point
6	User returns back to web shop	Web shop

**Note:** You cannot update a card with new card number, but you can update the expiry date of existing card number, if you get issued a new card with old number. In step 4, if the user enters the card number of an already saved card, the expiry date will be updated. If the user enters a non existing card number, then a new saved payment method will be created.
